Prepared by Pengyu Li (pengyuli4@um.cityu.edu.hk)

The supplementary material mainly includes supplementary code and supplementary video.

Supplementary Code 1:
This file includes the code for acceleration measurement and wireless data transmission.

Folder 'Battery-Less Wireless Sensor Tag': This folder includes the code for acceleration measurement and wireless data transmission.

Folder 'Receiver': This folder includes the code for receiving the wireless data and upload the data to the computer through the serial port.

Equipment: 2 sets of CC430F5137 and antennas, an accelerometer (ADXL362).

Platform: The project is developed under "Code Composer Studio 8.3.0 IDE"

To use the code, it is recommended to use "Code Composer Studio 8.3.0 IDE": (https://software-dl.ti.com/ccs/esd/documents/ccs_downloads.html) and import the folder into the IDE.

Supplementary Video 1:
This video presents the proposed application, which simulates the battery-less and wireless inspection of the railway tracks.
